

Odor + Disinfection Solutions For Animal Care Facilities

Fight odors + disinfect with smart technologies.

EMC's germicidal UV lighting combined with odor-reducing photocatalytic technologies retrofit into your facilities, enhancing the health and comfort of your pet owners, patients and employees. Our green, chemical-free solutions seamlessly integrate into daily operations, providing continuous disinfection and odor control without additional workload for your staff.

Remediate uncomfortable and unsafe contaminants.

EMC's solutions fit effortlessly into your infrastructure, enhancing the health and comfort of animals and staff through continuous environmental disinfection and odor control.

- Odor Reduction
- Continuous Air + Surface Disinfection
- HVAC Coil Cleaning
- HVAC Air Disinfection
- Mobile Disinfection
- Upper Air Room Disinfection

Reduce your HVAC operating costs.

Disinfection solutions, when integrated with an HVAC system, can generate energy savings that transfer to the bottom line. Retrofit solutions can be incorporated into existing building management systems to yield optimal savings.

Leverage EMC's total approach: CleanMAXX™

Our tailored process offers a customized solution for odor disinfection and energy savings projects in animal care facilities, ensuring improved hygiene, enhanced comfort and lower operational costs.

- Prioritize:** Targeted project rollout to maximize value
- Audit:** Ensures strong foundation for project delivery
- Design:** Optimal solutions tailored to your business
- Incentives:** Our experts maximize incentives for lowest project cost
- Logistics:** Efficient coordination to support business needs
- Installation:** Comprehensive plan to deliver on schedule
- Service:** Assures long-term project value

Disinfection Roadmap

EMC’s germicidal solutions including UV lighting along with photocatalytic technologies are offered through a systematic roadmap approach. We identify areas for air + surface disinfection to maintain the health and safety of the occupants. The following options are considered for each project:

Mobile
Mobile UV-C photocatalyzer + filtration solutions

Basic
No enhanced disinfection technologies; increase HVAC air exchanges + liquid cleaning frequency

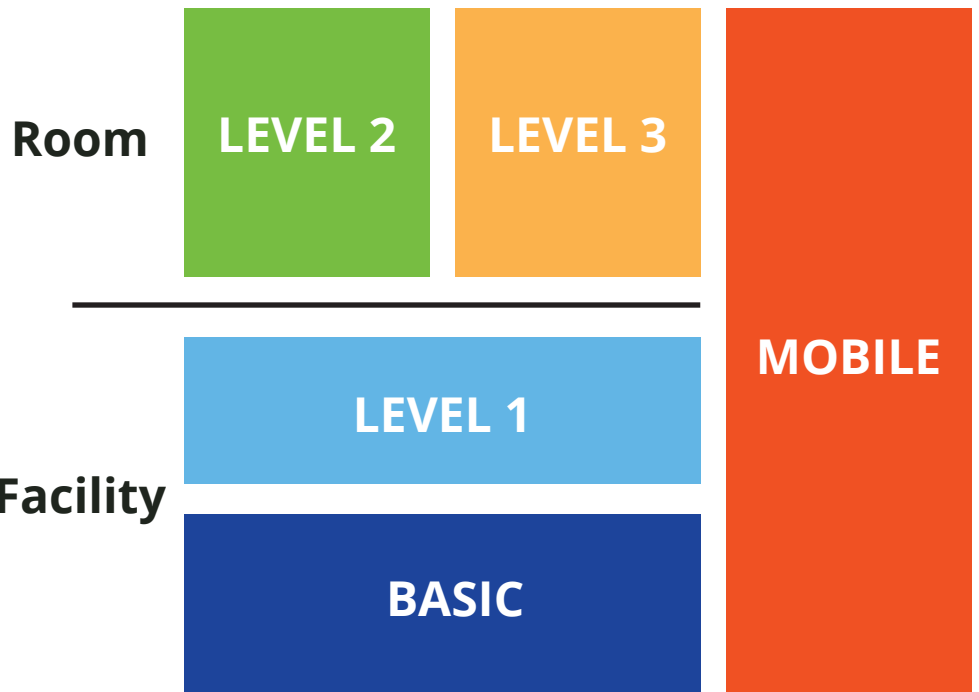

Level 1
Foundational HVAC clean air upgrade using UV-C light and/or photocatalyzers to treat an entire facility

Level 2
High intensity room air + surface disinfection using fixed or mobile UV-C photocatalyzer + filtration

Level 3
Active (continuous) disinfection of air and surfaces in occupied rooms

EMC Overview

- Founded in 2003
- Lighting + technology experts
- World class turnkey approach
- Vendor neutral
- Numerous Fortune 500 clients
- Over 12,000 projects annually

Step up your facility hygiene.
