

Specialized and Regulated Environments

LEADING THE FUTURE OF
LIGHTING + TECHNOLOGY

Efficiency Without Risk

Case Study

► The Challenge

Many companies need an experienced partner to perform energy management projects around sensitive equipment in work sites of all sizes.

► The Solution

EMC provides energy management solutions in lighting, HVAC, building controls, and special projects with significant experience in sensitive and highly regulated environments.

► Our Accumulated Expertise in Those Environments Includes:

Leading Telecommunications and Internet Provider

Completed projects at a headquarters and 700 additional sites containing sensitive equipment, delivering all work with zero incidents.

Major Overnight Delivery Service

Performed work around high-value aircraft where strict foreign-object controls were required to prevent damage or operational disruption.

Large Aerospace and Defense Contractor

Installed protective netting and completed overhead work while safeguarding sensitive equipment.

Work in Other Sensitive, Highly Regulated Industries

Delivered projects in food processing facilities and major banking institutions requiring strict access controls and background checks.

EMC takes a lifecycle approach to support the unique needs of customer operations, maximizing the efficiency, effectiveness and life of their investment. Our team has successfully brought customer environments into the future with the latest technology advancements.

► The Results + Future

EMC has the experience and expertise to successfully work around sensitive equipment and materials to perform energy management projects that create more efficiency and cost effectiveness for clients in any industry.

Our total project management approach, EnergyMAXX®, maximizes the results of each project phase—from multisite energy audits to utility rebate and incentive savings—bringing an immediate and positive impact to the bottom line.
