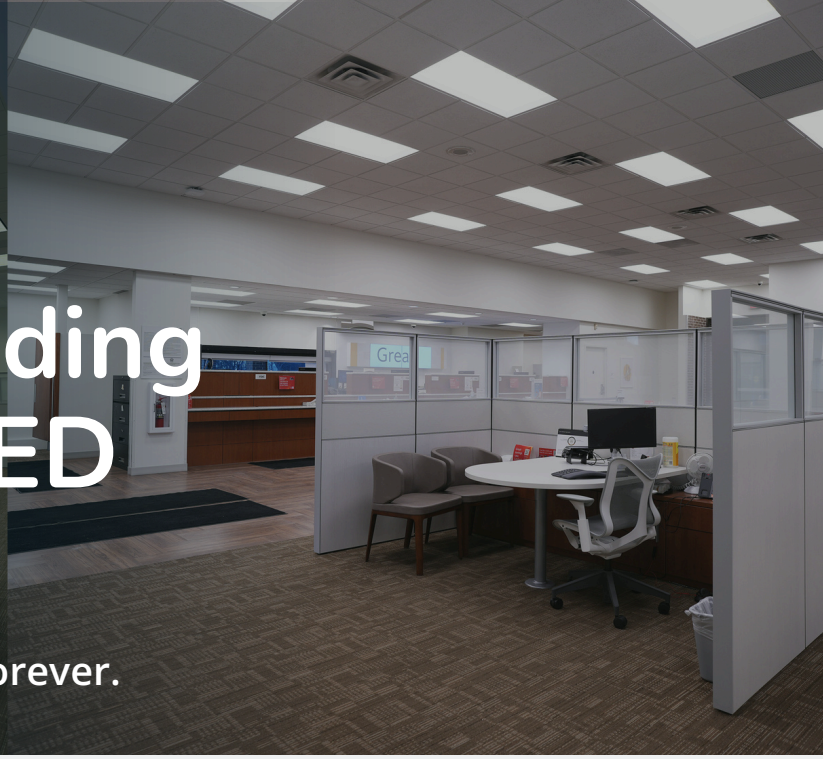
LED LIGHTING

LEADING THE FUTURE OF
LIGHTING + TECHNOLOGY



reLED: Upgrading Your Aging LED Systems

LED systems aren't built to last forever.

Why Upgrade LEDs?

Most LEDs decrease to **70%** of their original light output after 50,000+ hours of use, or about 5-7 years. reLED is the planned replacement of aging LED fixtures to maintain light quality, reduce maintenance issues and protect your brand standards.

Degraded Lighting Raises Risks and Costs

- Constant Outages
- Inconsistent Light Levels
- Reduced Safety For Operations and Customers

Failure-based Replacements Are Disruptive

- Teams are Forced to React
- Raising Costs
- Reducing Efficiency
- Draining Resources

Deferred Planning Means Deferred Problems

- Financial Pressure
- Low Maintenance
- High Power Production

Upgrading Makes Financial Sense

The payback period for upgrading to LEDs is typically **2-3 years.**

Increased Energy Savings

Fewer Service Calls

Optimized Performance

Strategic Benefits for LED Lighting Upgrades

With reLED, you aren't just keeping the lights on; you're leading with **efficiency** and **impact**.

Consistent Lighting Quality Across All Locations

- Enhancing Safety
- Supporting Merchandise and Operational Standards

Support ESG and Sustainability Initiatives

- Reducing Waste
- Increasing Energy Efficiency

Enables Bulk Procurement and National Rollouts

- Reducing Cost Per Site
- Minimizing Operating Disruption
- Reduces Reliance on Emergency maintenance vendors

Why Plan Now?

The reality is: reLED isn't a matter of "**if**" but "**when**." Planning now puts you ahead.

1 Utility Incentives For reLED Are Emerging

- Xcel Energy, for example, is offering a new 25% rebate for LED-to-LED upgrades in Minnesota for 2025. More utilities will follow suit.

2 Lead Times Remain A Challenge

- Early planning minimizes material and labor delays.

3 Proactive Beats Reactive

- Proactive planning puts you in control—avoiding budget shocks, service issues, and inconsistent customer experiences.

Partner with EMC!

Implement a proactive reLED strategy that enhances efficiencies, keeps locations performing at their best and meets your sustainability goals.
