

Key Benefits

Automated Compliance

The ELT automates both 30-second monthly and 90-minute annual compliance tests, ensuring consistent adherence to safety standards without any hassle.

Digital Reporting

Generate and access comprehensive compliance reports with ease, offering clear insights into the performance and functionality of your emergency lighting.

Remote Accessibility

Manage and monitor your system from anywhere, thanks to the ELT's remote connectivity options.

Easy Installation

The ELT system is designed for straightforward installation, retrofitting onto existing emergency fixtures.

ELT

The Future of Emergency
Lighting Maintenance

Welcome to EMC's ELT

Welcome to the world of efficient emergency lighting maintenance with the EMC Emergency Light Testing System.

Designed to retrofit onto your existing emergency fixtures seamlessly, ELT transforms traditional lighting into innovative, wirelessly connected units.

This cutting-edge system simplifies adherence to the NFPA 101 Life Safety Code and enhances the efficiency of compliance processes.

How ELT Works

The ELT system includes a central gateway and fixture nodes. The gateway connects to your local network and facilitates communication between the nodes and the cloud.

Each node is installed onto an emergency light fixture and conducts regular tests on the fixture's battery and light health. The system automatically runs tests according to a set schedule and reports the results to the user portal, ensuring your emergency lights are always compliant and functional.

ELT Features

Real-time Monitoring

Keep track of your emergency lighting status in real-time via the user portal.

Compliance Reports

Easily generate detailed compliance reports for all your emergency lights.

User-friendly Interface

The ELT dashboard is intuitive and easy to navigate, providing all necessary information at a glance.
